

AETHOS WEALTH • IPO DEEP DIVE

SpectraA Technology Solutions Limited

A 17-year process-plant engineer entering the public market with strong FY26 margins, a ₹81 crore order book and a Jaipur expansion that more than doubles factory floor area

The central question: Is SpectraA building a repeatable engineering platform with defensible process know-how—or is the IPO extrapolating one strong year before output capacity, utilisation and customer identities are adequately disclosed?

₹42.52 Cr

Total offer at ₹118

₹157.5 Cr

Post-issue market cap

13.6x

Post-money FY26 P/E

₹81.30 Cr

Order book: 25 Aug 2026

Research stance

The company has credible end-to-end process-plant capability, a broad stainless-steel and copper equipment portfolio, rising repeat-customer revenue, export momentum and strong FY26 profitability. The counterweight is customer opacity, working-capital intensity, supplier-funded cash conversion, regulatory clean-up around IPO readiness and a floor-area-led expansion without quantified output capacity.

Document basis: Red Herring Prospectus dated September 10, 2026. Offer parameters are evaluated at the ₹118 cap price. All product and factory images in this report are reproduced from the RHP.

COMPANY OVERVIEW

1. Business architecture and opportunity

What SpectraA sells: engineered process plants and equipment—from design and fabrication through installation, commissioning, operator training and after-sales support—for breweries, distilleries, malt spirit, food and beverage, extraction and allied process industries.

The customer buys an engineered process line and commissioning outcome—not merely a fabricated vessel.

FY26 product segment	Revenue	Share	Primary use case
Commercial brewery equipment	₹68.93 Cr	68.14%	Industrial brewing, fermentation, storage, CIP and filtration
Distillery equipment	₹11.80 Cr	11.66%	Copper pot stills and spirit distillation systems
Malt spirit equipment	₹10.40 Cr	10.28%	Milling, mashing, fermentation and distillation
Microbrewery equipment	₹8.58 Cr	8.48%	Smaller craft-brewing plants and cellar systems
Extraction / F&B; / others	₹1.45 Cr	1.44%	Botanical extraction, blending and thermal processing

Industry and demand drivers

- Brewers and distillers require hygienic, traceable and process-consistent systems; greenfield projects and brownfield debottlenecking support equipment demand.
- Customer economics depend on yield, batch consistency, cleaning time, energy use and uptime. Equipment qualification and commissioning history matter more than the steel vessel alone.
- The opportunity is attractive but project-led and cyclical. SpectraA has not disclosed its market share, and large engineering competitors have deeper balance sheets and broader global service networks.

WHAT THE COMPANY ACTUALLY BUILDS

2. Products, use cases and process technology

Product family	Equipment / technology	Customer outcome
Commercial & craft brewing	Brewhouse and cellar vessels; mash/wort kettles, lauter tun, whirlpool, fermenters, unitanks, bright-beer tanks, filtration and CIP	Controlled brewing, fermentation, cleaning and storage
Distillery	3,000–24,000 L copper pot stills; radiators, reboilers or coils; programmed automatic spirit distillation	Vapour-contact geometry and thermal control influence spirit character and repeatability
Malt spirit	Milling, mashing, fermentation, copper wash/spirit stills, condensers, blending and storage	Integrated production line from grain processing to spirit handling
Food & beverage	CSD blending, flash pasteurisation and carbo-blending; pulp, jam, ketchup, juice and energy-drink systems	Hygienic mixing, thermal treatment and dosing
Extraction	Solvent-based extractors and holding/buffer tanks for chilli, turmeric, marigold and spices	Recovery of botanical colours, flavours and actives

Specific engineering stack

- Design: CAD/CAE, P&IDs;, product lifecycle/version control, bills of material and reusable software/control blocks.
- Fabrication: AISI 304/304L and 316/316L stainless steel plus copper; CNC/plasma cutting, rolling, welding, automatic polishing, passivation, electropolishing, insulation and cladding.
- Heat transfer & cleaning: Omega laser-welded jackets, dimple jackets/pillow plates and clean-in-place systems.
- Quality: WPS/PQR, qualified welders, argon-purged sanitary welds, heat/batch traceability, DPT/RT/UT/MPI, pressure/leak testing and pre-FAT/FAT.
- Large-vessel execution: on-site fabrication where transportation limits make factory-built delivery impractical.

Disclosure strength: the RHP states 100% FAT success and no warranty claims in the last three fiscal years and the period ended September 30, 2025. These are useful execution indicators, but sample size, test protocol and claim thresholds are not disclosed.

EQUIPMENT IN THE FIELD

3. Product gallery—actual RHP photographs

Stainless process vessel

Dimple-jacket vessel

Copper distillation system

Bottling / process line

Packaged process skid

Microbrewery cellar

Copper still installation

Industrial process plant

Investor read-through: the photographs support real fabrication and installation capability across stainless-steel vessels, copper distillation systems and integrated skids. They do not, by themselves, establish proprietary IP or capacity utilisation.

Turnkey versus non-turnkey revenue

₹ crore	FY24	FY25	FY26	FY26 mix
Turnkey projects	81.59	64.37	87.78	86.77%
Non-turnkey supply	7.37	10.79	13.38	13.23%

Turnkey work increases wallet share and embeds engineering responsibility, but typically carries milestone billing, site execution and collection risk.

ENTRY BARRIERS

4. Competitive moat—what is real, what is not

Moat element	Evidence	Replicability / assessment
End-to-end execution	Design, fabrication, controls, installation, commissioning, training and service	Meaningful for smaller challengers; requires coordinated teams and reference projects
Engineering library	Accumulated P&IDs,, drawings, BOMs and reusable controls across 17 years	Learning-curve advantage, but no quantified proprietary library or software ownership disclosed
Hygienic fabrication	Sanitary welds, traceability, NDT, pressure testing and FAT	A qualification barrier; established fabricators can replicate with investment and discipline
Copper-still know-how	Geometry and thermal configuration for spirit distillation	Application know-how matters; patents are not disclosed
Installed references & service	50+ clients, operator training, spares, O&M; and AMC	Reduces perceived execution risk and can support repeat orders
ISO 9001:2015	TÜV Rheinland; valid to 14 Sep 2027; covers design, manufacture, PM, installation, commissioning and after-sales	Credibility and audit hygiene—not unique differentiation
Paques collaboration	Biological wastewater / biogas treatment know-how and technical support agreement dated 31 Aug 2025	Broadens solution capability; exclusivity is not disclosed

Moat verdict: SpectraA has an execution moat, not a patent moat. Only a word trademark is disclosed; no patent portfolio, ASME/PED certification or exclusive process licence is identified in the RHP. Praj, Alfa Laval and GEA remain credible competitive references.

What would strengthen the moat claim

- Customer-approved vendor status, tender win rates and repeat-project chronology by segment.
- Measured yield, energy, water, cleaning-time and commissioning advantages versus alternatives.
- More third-party certifications, proprietary automation modules or protected process designs.
- A growing AMC/O&M; installed base with recurring service revenue separately disclosed.

COMMERCIAL QUALITY

5. Customers, concentration and attrition

15.01%

Largest customer: FY26

46.75%

Top 5 customers: FY26

65.60%

Top 10 customers: FY26

50.07%

Repeat-order revenue: FY26

Metric	FY24	FY25	FY26	Interpretation
Top 1 customer	16.34%	11.50%	15.01%	Largest account rose again in FY26
Top 3 customers	42.83%	34.62%	35.18%	More than one-third of revenue
Top 5 customers	52.60%	44.60%	46.75%	Material project concentration
Top 10 customers	72.37%	61.91%	65.60%	Concentration improved versus FY24, worsened versus FY25
Repeat-order revenue	38.87%	30.68%	50.07%	Strong FY26 rebound; revenue measure only
New-customer revenue	61.13%	69.32%	49.93%	New wins still contribute about half

Customer names

Not disclosed. The company states that client names are confidential and consents were not received. SpectraA reports more than 50 clients, but investors cannot independently evaluate the quality, credit profile or longevity of the largest accounts from the RHP.

Client attrition—do not confuse the proxy with churn

- Customer-count attrition, customers lost, gross revenue retention and net revenue retention are not disclosed.
- Repeat-order revenue of 50.07% is a project-revenue mix, not a customer-retention rate. A client may remain active with a much smaller project—or disappear without the metric revealing it.
- The RHP states that no significant customer failed its obligations during FY24-FY26. That is a credit-performance statement, not evidence of zero attrition.
- No major order cancellations were reported over the last three fiscals, although quantities and prices were modified.

PIPELINE QUALITY

6. Order book, exports and revenue visibility

₹81.30 Cr

Order book: 25 Aug 2026

0.80x

Order book / FY26 revenue

29.38%

FY26 export share

56.32%

International share of Mar-26 book

FY26 export geography	Revenue	Share of FY26 exports
Germany	₹15.19 Cr	51.09%
Nepal	₹10.92 Cr	36.75%
UAE	₹1.91 Cr	6.43%
New Zealand	₹1.14 Cr	3.84%
Bhutan / West Africa	₹0.56 Cr	1.89%

Order-book composition and caveats

- At March 31, 2026, the book was ₹101.65 crore; commercial brewery equipment represented 88.39%. The August 25 book of ₹81.30 crore equals about 0.80x FY26 revenue.
- Germany revenue in FY26 equals the disclosed largest-customer revenue amount, but the RHP does not name the counterparty. This numerical overlap should not be used to infer identity.
- Export growth provides diversification but raises execution, freight, foreign-exchange, collection and country risks.
- An order book is not guaranteed revenue: delivery schedules, site readiness, scope changes and customer approvals can move recognition and cash collection.

Key monitoring question: What portion of the ₹81.30 crore book is executable in FY27, what advance has been collected, and what gross margin / working capital is embedded by project?

CAPACITY—AREA IS NOT OUTPUT

7. Manufacturing footprint and expansion

Facility	Current built-up area	Post expansion	Change
Bengaluru / Malur	13,789.77 sq. ft.	13,789.77 sq. ft.	No disclosed area addition
Jaipur / Chomu	19,424.98 sq. ft.	60,134.98 sq. ft.	+40,710 sq. ft.; 3.10x
Combined	33,214.75 sq. ft.	73,924.75 sq. ft.	+122.6%; 2.23x

₹11.61 crore Jaipur capex

Component	Amount	Purpose / machinery
Civil work	₹1.66 Cr	Building and site civil works
Shed and roofing	₹3.85 Cr	40,710 sq. ft. additional built-up area
Machinery	₹6.10 Cr	TRUMPF dimple punching, AMADA 3 kW laser cutting, EOT cranes, hydra crane and radial drill

Critical disclosure gap: the RHP does not disclose product-wise installed output capacity, vessel count, tonnage, machine hours, current utilisation, post-expansion output, revenue potential, asset turns or ramp-up. A 2.23x floor-area increase is not evidence of 2.23x production or revenue capacity.

GROWTH PLAN

8. Expansion execution and business strategy

Workstream	Planned window	Execution risk
Civil works	Oct-Dec 2026	Site readiness, contractor execution and approvals
Shed / roofing	Jan-Mar 2027	Weather, fabrication and commissioning sequence
Machinery procurement / installation	Nov 2026-Feb 2027	Delivery, integration, operator training and trials

Strategic pillar	What management plans	What investors should demand
Automation and throughput	Dimple punching, laser cutting, lifting and fabrication equipment	Cycle-time, labour-hour and defect reduction by process
Modular customisation	Configurable skids, common BOMs and reusable software blocks	Shorter design-to-FAT lead time and improved gross margin
Supply-chain resilience	Local / dual sourcing and procurement discipline	Imported-content trend and critical-component lead times
Lifecycle support	Preventive maintenance, remote diagnostics, training, spares, O&M; and AMC	Recurring-service revenue and installed-base metrics
Targeted exports	Key-account development and multi-site customer relationships	Win rate, country concentration and cash conversion
Environmental solutions	Paques-supported wastewater and biogas capability	Pipeline, project economics and commercial terms

Approvals watch: the company states that consent to operate and factory licence have been obtained for Jaipur, but the fire NOC application was pending. The Jaipur factory and registered office also lacked occupancy/completion certificates as disclosed in risk factors.

Strategy quality

The strategic direction is coherent: standardise design, increase in-house fabrication, support larger projects and monetise the installed base. The missing bridge is quantitative—management does not connect the machinery list to incremental throughput, revenue, margins, working capital or ROCE.

PROMOTERS AND KEY EXECUTIVES

9. Management—the operating bench

Name / role	Education	Experience and other positions
A. L. Arun Kumar, Chairman & MD, 48	BE Mechanical, Dr. Ambedkar Institute of Technology (2000)	21 years in brewery equipment; former Assistant Manager-BD, Praj brewery business (2003–09). Leads operations, strategy and customers. Director: Lumiere Technologies Pvt Ltd; SpectraA Singapore; Lumiere Technologies FZE; Spectraa Industries FZ-LLC.
Sailaja Arun Kumar, Promoter & NED, 44	BSc Microbiology, PSG (2002); MSc Biotechnology, University of Madras (2004)	17 years as director; not involved in daily operations. Director: Lumiere Technologies Pvt Ltd and SpectraA Singapore.
Venkatraman Murali, Whole-time Director, 64	BE Chemical (1984); ME Chemical (1987), Annamalai University	Process / operations background at United Spirits, Gansons Engineers and Associated Drug. Director: Genetics Engineering Services. The RHP cites 13 years in brewery/distillery despite a longer dated career history—clarification is warranted.
Anandi Viswanathan, CFO	BSc Zoology; Chartered Accountant	23 years in finance/accounting; appointed 15 Oct 2025. Former finance controller at True Build and other audit/accounting roles.
Mona Poddar, Company Secretary	BCom; member, ICSI	Six years of experience; appointed 1 Sep 2025; previously with Mubarak Cosmetic.
Binodh Meethal Raman, GM-Business Development	BE Electrical & Electronics	16 years; with SpectraA since January 2010.

Key-person risk: the founder’s prior Praj experience, customer relationships and process-equipment judgment are central to the franchise. The RHP does not quantify second-line project ownership, succession depth or management incentives after listing.

BOARD OVERSIGHT

10. Independent directors—qualifications and positions

Independent director	Education / credentials	Experience and positions held
Shital Darak Mandhana	BCom; LLB, Government Law College / University of Mumbai; Company Secretary and Fellow, ICSI; diploma in cyber law; Certified Forensic Examiner; registered valuer	15 years. Practising company secretary. Current independent director: Avana Electrosystems. Previously Company Secretary at Kurlon and Avesthagen. Appointed 4 Oct 2025.
Sheela Arvind	Diploma in Business Administration; BCom, University of Mysore; LLB; Company Secretary and Fellow, ICSI	22 years in governance, tax and secretarial practice. Independent director: Avana Electrosystems, Pasari Spinning Mills and SAM Infoways. Director: DRS Management Consultants and Applied Realtech. The RHP shows inconsistent appointment years—2024 in the profile and 2025 in another table.
K. N. Gopalakrishnan	BSc Chemistry, University of Madras; MSc Chemistry, IIT Kanpur; post-diploma in Quality Management	37 years in pharma/distillery quality and operations; prior roles at Carlsberg India, United Breweries, South Asia Breweries, SKOL, Lupin, Astra-IDL, Shaw Wallace and Briggs of Burton. No other directorship disclosed. Appointed 8 Oct 2025.

Board structure and readiness

- Six directors: two executive, one non-executive promoter and three independent directors.
- The board has relevant legal/governance and industry-quality expertise. However, all three independent directors were appointed in the IPO-readiness period, limiting evidence of pre-listing oversight.
- The company had earlier crossed the statutory turnover threshold but did not appoint independent directors on time. A compounding application filed on November 24, 2025 remained pending as disclosed.
- The recent appointment of the CFO, Company Secretary and independent directors strengthens formal governance, but effectiveness must be demonstrated through clean post-listing reporting and challenge of related-party matters.

Board watch: the apparent appointment-date inconsistency for Sheela Arvind should be reconciled. Investors should also examine audit committee minutes, tenure, attendance and whether industry expertise translates into independent challenge.

INCOME STATEMENT

11. Financial performance—FY26 was a step change

Revenue from operations (₹ crore)

₹ crore / margin	FY24	FY25	FY26	FY24-26 trend
Revenue from operations	88.96	75.17	101.16	6.6% CAGR; volatile
Gross profit	29.21	36.17	47.58	Gross margin expanded sharply
Gross margin	32.83%	48.12%	47.03%	FY26 broadly sustained FY25 level
EBITDA	4.48	10.13	19.26	More than 4x FY24
EBITDA margin	5.03%	13.48%	19.04%	+1,401 bps versus FY24
PAT	2.00	4.91	11.56	140% FY24-26 CAGR approx.
PAT margin	2.25%	6.54%	11.42%	Strong operating leverage
ROCE	20.55%	31.92%	37.61%	Strong disclosed return
ROE	27.92%	46.14%	60.95%	Elevated by small equity base / leverage

Quality question: FY26 revenue grew 34.6%, but EBITDA grew 90.1%. The company must demonstrate that the 19% margin reflects durable project mix and execution gains—not a temporary concentration of high-margin milestones.

Peer caution

The RHP presents only Praj Industries as a listed peer and explicitly says it is not strictly comparable. Praj is vastly larger and has a broader technology portfolio; its point-in-time FY26 earnings and P/E are not a reliable valuation anchor for this SME issue.

EARNINGS CONVERSION

12. Cash flow, leverage and working capital

Metric	FY24	FY25	FY26	Assessment
Cash flow from operations	₹0.62 Cr	₹0.60 Cr	₹7.98 Cr	Improved materially in FY26
CFO / PAT	31.1%	12.3%	69.1%	Still below earnings
Receivable days	100	178	152	Elevated; project approvals extend collection
Inventory days	38	48	46	Moderate but likely project-dependent
Payable days	173	193	235	Supplier funding increased materially
Net working capital	₹9.23 Cr	₹16.38 Cr	₹25.53 Cr	25.2% of FY26 revenue
Debt / equity	—	—	1.09x	Meaningful leverage pre-issue
DSCR	—	—	2.66x	Adequate at FY26 earnings

49.8%

Cumulative FY24–26 CFO / PAT

₹21.52 Cr

FY26 net debt approx.

₹42.77 Cr

FY26 trade receivables

₹25.35 Cr

Short-term loans / advances

- Cumulative CFO of ₹9.21 crore covered only about half of cumulative PAT of ₹18.48 crore over FY24-FY26.
- FY26 debt was about ₹26.96 crore against cash of ₹5.44 crore. The IPO proposes ₹6.48 crore of debt repayment.
- Payable days of 235 cushioned cash flow. A normalisation toward the FY27 planning assumption of 150 days could absorb substantial liquidity.
- The FY27 working-capital estimate rises to ₹63.95 crore; only ₹9.50 crore of IPO funds is earmarked for incremental working capital. Execution must therefore remain disciplined.

Watch the cash, not only PAT: future growth can consume cash through advances, inventory, milestone receivables and retention money well before revenue converts to collections.

OFFER ANALYSIS

13. IPO structure, dilution and valuation

Offer component	Shares	At ₹118	Use / seller
Fresh issue	32.556 lakh	₹38.42 Cr	Jaipur capex ₹11 Cr; debt repayment ₹6.48 Cr; working capital ₹9.50 Cr; balance GCP / expenses
Offer for sale	3.480 lakh	₹4.11 Cr	A. L. Arun Kumar and Sailaja Arun Kumar: 1.740 lakh shares each
Total offer	36.036 lakh	₹42.52 Cr	27.00% of post-issue equity

Metric at ₹118	Value	Investor read-through
Post-issue shares	133.472 lakh	Fresh dilution of 24.39%
Post-issue market capitalisation	₹157.50 Cr	SME scale; liquidity risk remains
Post-money FY26 P/E	13.63x	Uses FY26 PAT of ₹11.56 Cr
Pre-money FY26 P/E	10.31x	Not directly comparable with post-issue ownership
Price / FY26 sales	1.56x	Reasonable only if margin durability holds
Price / pre-issue NAV	4.80x	RHP NAV: ₹24.58 per share
Promoter holding	96.04% → 70.00%	Still controlled after issue

Pre-IPO transaction: on September 9, 2026, promoter Arun Kumar sold 4.00 lakh shares to Convivial Advisors LLP at ₹118—the IPO cap price—representing 3% of post-issue capital. Investors should understand the rationale and any commercial relationship.

Valuation conclusion

At 13.6x post-money FY26 earnings, the headline multiple is not demanding. The risk is the denominator: FY26 EBITDA margin was a record 19% after a volatile revenue history, while cumulative cash conversion was only 50%. Valuation comfort therefore depends on margin and cash-flow durability, not on the multiple alone.

INSTITUTIONAL SIGNAL

14. Anchor allocation

10.248 lakh

Anchor shares

₹118

Anchor price per share

₹12.09 Cr

Anchor book size

5

Anchor investors

Anchor investor	Disclosed allocation note
Aarth AIF Growth Fund	Part of five-investor anchor book
Arthasanchay Investment Trust – Arthsanchay Growth Fund	Part of five-investor anchor book
Evergrow Capital Opportunities Fund	Part of five-investor anchor book
Fortune Hands Growth Fund Scheme I	Reported allocation approximately ₹5.00 crore
Khandelwal Finance Private Limited	Reported allocation approximately ₹2.87 crore

Signal quality: the anchor book provides early demand validation but is small and concentrated. No domestic mutual fund, life insurer or pension fund appears in the disclosed five-name list. Anchor participation is not a substitute for fundamental underwriting.

How to interpret anchor demand

- Evaluate investor quality, concentration and lock-in rather than only the headline amount.
- The anchor price equals the cap price; it does not prove that post-listing liquidity or valuation will be stable.
- SME issues can experience sharp demand and price moves because the free float is limited and lot sizes are large.

DILIGENCE FLAGS

15. Governance, related parties and compliance

Area	Disclosure	Assessment
Independent directors	Appointed after threshold breach; compounding application pending	IPO-era remediation; test effectiveness after listing
Corporate records	ROC delays/discrepancies; some share-transfer forms and gift deeds untraceable and reconstructed	Historic control weakness
Deposits	Compounding fee of ₹75,000 paid; order dated 14 Feb 2026	Resolved but adds to compliance pattern
Statutory dues / loans	Multiple GST, PF/ESI and instalment delays disclosed	Liquidity and control discipline need monitoring
Properties / approvals	Occupancy/completion certificates absent for Jaipur factory and registered office; fire NOC pending	Potential operational / regulatory exposure
Tax matters	Company proceedings ₹21.24 lakh; contingent tax liabilities ₹36.31 lakh	Not large relative to offer, but track outcomes

Selected related-party transactions—FY26

Counterparty / relationship	FY26 transaction / balance
Promoters / directors	Arun remuneration ₹42.34 lakh; Sailaja ₹7.42 lakh; Murali ₹10.64 lakh
Raman Appukuttan Nair, director relative	Remuneration ₹6.11 lakh plus labour charges ₹1.74 crore
Lumiere Technologies Pvt Ltd	Purchases ₹2.37 crore; sales ₹3.26 crore; advance recoverable ₹1.42 crore
Overseas related entities	Spectraa Industries FZ-LLC sales ₹0.27 crore / advance ₹0.87 crore; Lumiere FZE receivable ₹2.74 crore
Arun Kumar borrowings	₹2.57 crore taken and ₹3.26 crore repaid; nil closing balance

Governance verdict: the issues are not individually thesis-breaking, but together they show that public-company controls are newly installed. Clean filings, independent review of related parties and transparent capex reporting are essential post-listing tests.

MANAGEMENT CHECKLIST

16. Questions management must answer

#	Question	Why it matters
1	What are current and post-expansion product-wise capacities, utilisation, machine hours and bottlenecks?	Floor area is not output capacity.
2	What revenue, EBITDA, asset turns and ROCE does the ₹11.61 crore Jaipur capex target?	The project lacks a financial bridge.
3	How much of the ₹81.30 crore order book is executable in FY27 and backed by advances?	Tests visibility and working-capital risk.
4	Who are the top customers, subject to consent, and what are customer-count churn, GRR and NRR?	Repeat-order revenue is not attrition.
5	Why did FY26 EBITDA margin reach 19%, and what portion is repeatable?	Valuation depends on earnings quality.
6	Why did cumulative CFO cover only 50% of PAT, and why were payable days 235?	Supplier credit supported cash conversion.
7	Which process designs, automation modules or vendor approvals are proprietary or exclusive?	Separates moat from capable fabrication.
8	What economics and exclusivity apply to the Paques collaboration?	Potential growth vector remains unquantified.
9	When will pending fire / occupancy approvals and the independent-director compounding matter close?	Public-company compliance should be complete.
10	What safeguards govern related-party labour charges, intercompany trade and advances?	Protects minority shareholders.
11	Why was a 3% post-issue stake sold pre-IPO at ₹118, and what is Convivial Advisors' relationship?	Clarifies promoter liquidity and alignment.
12	How deep is the project-management bench beyond the founder, and what is the succession plan?	Founder dependence is material.

The most important answer: a project-by-project FY27 bridge from opening order book to revenue, gross margin, milestone receivables and cash collection—paired with a product-wise capacity table for the expanded Jaipur unit.

INVESTMENT VIEW

17. Final assessment and headline flags

Bottom line: SpectraA is a real engineering business with credible fabrication capability, reference installations, rising repeat-order revenue and attractive FY26 returns. The offer is not expensive on FY26 PAT. Yet the strongest year arrives just before listing, cash conversion trails earnings, customer identities are opaque, and the key expansion measures square feet rather than output economics.

Supporting the thesis	Tempering the thesis
• 17-year engineering track record • End-to-end design-to-commissioning capability • ₹81.3 crore order book • FY26 exports at 29.4% of revenue • Repeat-order revenue rose to 50.1% • 19.0% EBITDA margin and 37.6% ROCE • Cap price implies 13.6x post-money P/E	• Customer names and true attrition not disclosed • Top-10 customers are 65.6% of revenue • No product-wise capacity or utilisation • Cumulative CFO / PAT only 49.8% • Payable days rose to 235 • IPO-era compliance and board remediation • Moat is execution-led, not patent-led

Trigger tracker

Track	Bullish evidence	Warning sign
Order conversion	FY27 execution with timely advances and collections	Scope slippage or receivable build
Capacity	Output/utilisation and customer-backed ramp disclosed	Only building-completion updates
Margins	Mid-to-high teens with steady cash conversion	Sharp normalisation after listing
Service moat	AMC/O&M; and repeat-project metrics expand	One-off fabrication remains dominant
Governance	Clean filings, approvals closed, disciplined RPTs	Fresh delays or unexplained related-party balances

HEADLINE FLAGS

POSITIVE	End-to-end process-plant capability, ₹81.3 crore order book and rising export execution.
POSITIVE	FY26 EBITDA margin of 19.0%, PAT margin of 11.4% and ROCE of 37.6%.
WATCH	Top-10 customers contribute 65.6%; names and true customer attrition are not disclosed.
WATCH	The execution moat is credible, but no patent portfolio or exclusive core process licence is disclosed.
RED FLAG	The 2.23x factory-area expansion has no disclosed product output, utilisation or revenue-capacity bridge.
RED FLAG	Cumulative CFO / PAT is 49.8% and FY26 payable days rose to 235.
GOVERNANCE	Historic compliance gaps and recent board/CFO/CS appointments make post-listing controls a key test.
VALUATION	₹118 implies 13.6x post-money FY26 P/E—reasonable only if FY26 margins and cash conversion prove durable.

Primary source: SpectraA Technology Solutions Limited Red Herring Prospectus dated September 10, 2026. Offer and anchor parameters cross-checked against public disclosures available through September 21, 2026. Calculations are Aethos Wealth estimates from disclosed figures.
